## Aseptic filling machine

### Filler

The Asep-Tec filler is designed to fill, under aseptic conditions, fruit juices and dairy products. For many of these products the shelf life is not only limited to microbiological activity but also to chemical deterioration such as oxidation. For these products the shelf life can be increased by reducing the oxygen level in the filled and sealed bottle. The total process of product storage, bottle and cap treatment, as well as controlling the internal conditions in the aseptic zone of the filler, require special attention in order to reduce the oxygen level in the filled and sealed bottle. Stork has designed several modules and systems for this purpose with their 'Modified Atmospheric Filling system' (MAF).
